Aniline Waxy Pull-Up Leather

This leather has been manufactured from genuine cattle hides. During its life the animal may have come in contact with bushes, barbed wire or the horns of other animals. These episodes may have left scars and scratches that have healed naturally. These marks enhance its appearance as they are proof marks of genuine leather and they do not detract from its wearing qualities.

DO NOT DRY CLEAN

DO NOT MACHINE WASH

www.theshanngroup.com

Pull up leathers are coloured with aniline dyes that are impregnated with natural oils and / or waxes instead of being coated with paints and pigments. The oils and waxes tend to darken the original aniline dye colouring, but “pull up” the lighter colour when stretched and pulled. The oils and waxes provide even more beautiful shading and unique variations. The aniline dyeing process allows the scars, scratches and wrinkles that occur naturally on the leather hides, to show through the finish. Colour variation throughout the hide can be expected.

Care Instructions:

Do not use detergents, solvents, abrasives, leather cleaners or suede cleaners, as they will tend to remove the natural oils in the leather. Do not dry clean or machine wash. Protect from direct sunlight and heat sources, both direct and through heating vents. Vacuum regularly with the soft brush attachment of the vacuum cleaner to remove dust and grit, then wipe with a soft, colour fast cloth dampened with plain water. This should be done as often as necessary or at least every 2-3 weeks. Surface scratches can be removed by rubbing them with your fingertips as the warmth of your hand releases the natural oils, blending away the marks results will depend on the depth of the scratches.

Special Note:

The salts and body oils which occur naturally in human skin can damage the surface of leather if left uncleaned for lengthy periods, even medical conditions and prescriptions can have adverse effects on the leather. In warm or humid climates, it is important that the leather be wiped over as often as weekly, particularly if the leather has become damp with perspiration or deposits of body oils are visible on areas such as head and arm rests. Always clean along any creases that have developed in the leather and pay particular attention to areas that come in contact with the skin such as head rests, arm pads or seat cushions. Shann stands by its reputation of distributing quality leathers with a **guarantee** to repair or replace any leather which is found to be faulty as a result of tannery defect and which has been used in accordance with the recommendations of SHANN LEATHER. Deterioration due to incorrect or inadequate maintenance cannot be considered a fault in the leather and claims due to this will not be entertained. The first point of contact for warranty claims is the retailer/manufacturer from where the product was purchased.
